

AI projects: Dispute prevention and resolution

AI is changing the way businesses operate. Alongside the enormous potential benefits are a host of legal implications and potential pitfalls. [DLA Piper's Technology Disputes group](#) are partnering with the authors of [The Law of Artificial Intelligence](#) ([Matthew Lavy](#), [Iain Munro](#), and [Rebecca Keating](#)) for a practical webinar on AI projects from contracting to dispute resolution. Whether you are a supplier of AI systems or a customer procuring AI, this webinar will highlight the most important issues for your business and give you insight into the closed-door conversations of your counterparties. Using a light-hearted scenario as its inspiration, this session aims to bring the topic to life and to help you get ready for the AI revolution.

The talk will cover:

- Why it matters that you are contracting for AI – the legal implications you should know about.
- Provisions to include in your contract to maximise the prospects of a successful project.
- AI liability issues and best practices if a dispute should arise.
- Practical remedies in the event of a dispute.

20 October 2021

2:00 PM – 3:00 PM BST

3:00 PM – 4:00 PM CET
